

Lockout / Tagout Safe Isolation - City & Guilds

Course Aim

This course is designed to provide technicians with the safe methods and best practices for identifying types and sources of hazardous energy, unsafe equipment and conditions.

The course outlines the requirements to safely isolate and lock off a hazardous source of energy using recognised Lockout / Tagout equipment and procedures.

Who Should Attend?

This course is aimed at technicians who are required to follow safe working practices in order to minimise the risk associated with their daily work, to protect themselves and others who may be affected by their work.

It is specifically aimed at those maintenance technicians who are required to implement an effective safe isolation procedure and effectively and safely hand the duty of care to a suitably trained and competent person for repair or replacement.

The course demonstrates how to maintain a safe working environment until such time as the completion of necessary remedial works and the safe removal of any risk to persons or property.

Delegates must be aged 16 or over.

Course Duration

This is a 1 day course.

Agenda

- Statutory regulations, guidance and safe systems of work
- Hazardous energy sources and unsafe conditions
- Identifying potential hazards
- Reporting unsafe conditions
- Control measures and basic protection
- Safe isolation procedures
- Lockout / Tagout (Locking Off)
- Voltage testing
- Protective devices and additional protection
- Maintenance procedures
- Practical exercise - safe isolation
- Written assessment

Maximum Delegates

Maximum attendees: 10 delegates.

Certification

Delegates successfully completing the course will be issued with certificate accredited by City & Guilds after 28 days, which is valid for 3 years.
