

Emergency Lighting Part 2: Advanced Maintenance and Operation

Course Aim

This 1-day course enables delegates to further develop the knowledge and skills learnt from the Emergency Lighting Part 1 course, including servicing & maintenance of the emergency lighting system. Delegates will learn to audit existing systems, provide advice on routine maintenance and to carry out periodic and remedial servicing. The course is based on BS 52661 a guidebook for emergency lighting .

Who Should Attend?

This course is aimed at engineers with a basic knowledge of safety systems who want to improve their knowledge of requirements and techniques required to be able to test, maintain and repair emergency lighting systems. The course is also aimed at engineers who are responsible for emergency lighting systems, wanting to be able to assess and demonstrate the suitability and condition of the system for specific sites.

Course Duration

This is a 1 day course.

Maximum Delegates

Maximum attendees: 12 delegates.

Agenda

Topics covered within the Emergency Lighting Part 2 course include:

- Legislative requirements for emergency lighting
- Relevant standards
- Installation considerations
- Reporting procedures for existing premises
- Testing considerations, function, and duration tests
- Testing procedures and the use of automatic systems
- Fault rectification
- Protection of the premises during fault rectification
- Completion of the testing documentation

Certification

Upon successful completion of the course and passing the exam, delegates will receive a digital certificate of attendance.
